Office 365 on Windows*

Together with Office, Windows gives individuals and teams the breadth of tools they need to do what matters—faster.

1. Ink the way you think.

Use the digital pen** to easily annotate Office documents, edit them directly, strikethrough words to delete them, circle text to select it, highlight with precision, and leverage shape recognition to transform drawings into shapes. Users can replay the sequence of mark-ups from co-workers to better understand another's thought process.

2. Cloud location, familiar navigation.

With Files On-Demand, users can access all their files in the cloud without having to download them and use storage space on their device. All files—even online-only files—can be seen in File Explorer and work just like every other file on the device. Users will be able to open online-only files from within any desktop or Windows Store apps using the Windows file picker.

3. The best duo for multitasking.

New multi-tasking features in Windows pair perfectly with Office. Users can arrange their screens however they want to easily open and manage multiple Office apps and documents on one screen, and effortlessly snap up to four documents or apps at a time into view to optimize their digital workspace.

4. Add power to the point with 3D.

Employees can leverage 3D content to increase the visual and creative impact of their PowerPoint, Word, and Excel documents. They can easily insert a 3D object from the Remix 3D catalog***, their device, or cloud locations, then use the 360-degree rotation handles to change its perspective.

5. Smarter digital assistance.

A more productive user. [For use in Cortana markets only] Office and Cortana⁴work together to help users get more done, like finding what they need, including emails and documents stored on OneDrive or on their PC.

¹Requires Office 365 subscription. ²iOS requires separate app download. ³iOS and Android require separate app download. ⁴Requires touch enabled device. ⁵Publisher and Access are for PC only. For more info: support.office.com
